SPECIALISTS IN NATURAL ROOFING SLATE AND CLAY TILES

The Stoneleaf Celtic Grey slate is a product with a rugged textured surface, hand split from premium quality Grade A rock, formed 400 million years ago during the Ordovician period, the same time as Ffestiniog Welsh slate. Increasingly the preferred choice of specifiers, developers, private homeowners and conservation officers, the Celtic Grey adds character and charm to the most prestigious properties.

Benefits

Design and Appearance - The thickness and unique surface of the Celtic Grey results in a roof finish that has texture, depth and character.

Weight

At approximately 54-61kg/m² when laid, it is heavier than many other roof slate finishes, making it less liable to wind damage in our increasingly turbulent climate.

Strength

The Celtic Grey is an extremely strong slate, reducing the risk of breakages often caused by following trades after installation.

Thickness

The Stoneleaf Celtic Grey is approximately 8mm thick and the extra heavy is 10mm thick, which is twice the thickness of many slates.

Environment

Celtic Grey Slates are very environmentally friendly and are classified as an 'A' rated product by the BRE Green Guide to Specification.
